STANDARDIZATION OF EPPLEY PRECISION SPECTRAL PYRANOMETER **Model PSP**

Serial Number: 31247F3

Resistance: 697Ω at 23° C

Temperature Compensation Range: -20° to +40°C

This radiometer has been compared with Standard Precision Spectral Pyranometer, Serial Number 21231F3 in Eppley's Integrating Hemisphere under radiation intensities of approximately 700 watts meter⁻² (roughly one half a solar constant).

As a result of a series of comparisons, it has been found to have a sensitivity of:

8.01 x 10⁻⁶ volts/watts meter⁻²

The calculation of this constant is based on the fact that the relationship between radiation intensity and emf is rectilinear to intensities of 1400 watts meter⁻². This radiometer is linear to within \pm 0.5% up to this intensity.

The calibration of this instrument is traceable to standard self-calibrating cavity pyrheliometers in terms of the Systems Internationale des Unites (SI units), which participated in the Eleventh International Pyrheliometric Comparisons (IPC XI) at Dayos, Switzerland in September-October 2010.

Eppley recommends a minimum calibration cycle of five (5) years but encourages annual calibrations for highest measurement accuracy. Unless otherwise stated in the remarks section below or on the Sales Order, the results are "AS FOUND / AS LEFT".

Useful conversion facts:

1 cal cm⁻² min⁻¹ = 697.3 watts meter⁻² 1 BTU/ft²-hr⁻¹ = 3.153 watts meter⁻²

Shipped to: University of Hawaii

Date of Test: February 26, 2013

Honolulu, HI

S.O. Number: 63720

Date: March 4, 2013

In Charge of Test: Dulra L. Gently
